

All-round project management tool

FX-Editor helps you prepare, design, program, follow-up, share, change, update and backup projects with Fidelix equipment. When managing your projects, FX-Editor will help you by automatically generating device lists, connection diagrams and cable specifications for all the I/O's you've created, making order printouts per site, manufacturer or substation, and it will help you to connect and test all I/O's really fast and easily. Make adjustments to your project at any point down the line, and FX-Editor will automatically update all documents you need.

FX to FX, brothers in a team with a mission

It has never been so easy to control your Fidelix FX-substations as with this dedicated control software, FX-Editor. Because we develop everything in-house, you can be sure FX-Editor is the best tool you can have to manage your work flow. Since our own projects are designed, programmed, and managed with FX-Editor, we understand the need for a clear and easy way to quickly adjust, update or get an overview of the project you are working on. Meet FX-Editor.

Features

- Create new projects in minutes with the integrated HTML-Editor and the function to read all I/O-points straight from the graphics
- One tool to manage every aspect of your project. From creating graphics over PLC programming, generating orderlists and calculating the cost to testing cables and I/O-points and the commissioning of the project.
- Create your own customised look and feel with your company logo for the printouts with cable lists, I/O-connections, testing lists, ...
